

ExpatCalc Slovakia

Tax Calculator Audit Report

Tax Year 2026 • Comprehensive Verification

Audit Date	March 21, 2026
Auditor	Claude (AI Tax Auditor)
Subject	slovakia.html — ExpatCalc Net Salary Calculator
Jurisdiction	Slovak Republic (Slovensko)
Tax Year	2026 (effective 1 January 2026)
Severity Levels	BUG WARNING INFO OK

1. Executive Summary

This report presents the findings of an independent audit of the ExpatCalc Slovakia net salary calculator (slovakia.html). Every tax constant, formula, and logic path was verified against official Slovak government sources, Big Four advisory publications, and independent online calculators. The audit identified **2 bugs**, **2 warnings**, and **2 informational items**, alongside confirmation that the majority of the calculator's logic is correct and well-implemented.

Category	Count	Details
Bugs (must fix)	2	Minimum wage constant; employer social insurance rate
Warnings	2	NCZD payslip view gap; dead code
Info	2	Currency display; chart scrubber range
Confirmed OK	15+	All major tax rates, brackets, thresholds, formulas

2. Methodology

The audit was conducted in three phases: (1) source code review of every constant, formula, and logic branch in slovakia.html; (2) cross-referencing against authoritative sources; and (3) numerical verification against independent online calculators.

2.1 Sources Consulted

- **Official:** Socialnapoisovna.sk (contribution tables), MPSVR SR (minimum wage decree), Financnasprava.sk (income tax brackets, NCZD rules)
- **Big Four / Advisory:** PwC Slovakia Tax Memo 2026, KPMG Tax Card Slovakia 2025-2026, Accace Newsflash Jan 2026, Grant Thornton Slovakia Tax Summary
- **Legal portals:** Podnikajte.sk, Danovy-poradca.sk, Finance.sk
- **Independent calculators:** Marian Drozd calculator (mariandrozd.sk), Danovy-poradca.sk payroll calculator, Platy.sk net salary tool

2.2 Test Scenarios

- Example 1: Gross 2,000 EUR/month, single, no children
- Example 2: Gross 5,000 EUR/month, single, no children (NCZD reduction zone)
- Example 3: Gross 1,200 EUR/month, married, 2 children (ages 5, 16)
- Example 4: Gross 800 EUR/month, single, 1 child (age 10), low-income scenario
- Edge case: above social insurance cap (16,764 EUR/month)
- Edge case: ZTP (disability) reduced health insurance rates
- Edge case: pensioner (no NCZD entitlement)
- Edge case: excess tax bonus clawback

3. Findings

[BUG] F-01: Minimum Wage Constant Incorrect

Location: slovakia.html, line ~430 — `const MIN_WAGE = 916;`

Expected: 915 EUR/month

Source: MPSVR SR Decree No. 321/2025 Z. z., setting the minimum monthly wage for 2026 at 915 EUR. Confirmed by PwC Slovakia Tax Memo (Jan 2026), Podnikajte.sk, and Accace Newsflash.

Impact: The minimum wage constant is used in: (a) the salary slider minimum, (b) the footer display text, and (c) potentially as a floor for certain benefit calculations. The 1 EUR discrepancy is minor but factually incorrect and undermines trust in the calculator's accuracy.

Recommendation: Change `MIN_WAGE` from 916 to 915. Update the footer text accordingly.

[BUG] F-02: Employer Social Insurance Rate Double-Counts Unemployment + Support

Location: slovakia.html, employer cost calculation in `computeBreakdown()`

The calculator declares the following employer-side capped rates:

Component	Code Value	Correct Value	Status
Sickness (nemocenske)	1.4%	1.4%	OK
Old-age (starobne)	14.0%	14.0%	OK
Disability (invalidne)	3.0%	3.0%	OK
Unemployment (nezamestnanost)	1.0%	0.5%	WRONG
Support financing (financovanie podpory)	0.5%	0.5%	OK*
Guarantee fund (garancny)	0.25%	0.25%	OK
Reserve fund (rezervny)	4.75%	4.75%	OK
CAPPED SUBTOTAL	24.9%	24.4%	WRONG
Accident (urazove, uncapped)	0.8%	0.8%	OK
TOTAL (at/below cap)	25.7%	25.2%	WRONG

Explanation: As of 1 January 2025, the support financing fund (financovanie podpory) was introduced at 0.5% of the assessment base. However, this was offset by reducing the unemployment insurance rate from 1.0% to 0.5% for employers. The calculator includes both the old unemployment rate (1.0%) and the new support rate (0.5%), effectively double-counting 0.5%.

Source: Socialna poistnovna — official contribution rate tables 2026; verified against Marian Drozd reference calculator (1,800 EUR gross yields employer social contribution of 453.60 EUR = 25.2% of gross, not 25.7%).

Impact: The employer cost ("super-gross") is overstated by 0.5% of gross salary (capped). For a 2,000 EUR gross salary, this means the employer cost is overstated by approximately 10 EUR/month.

Recommendation: Change `ER_UNEMPLOYMENT` from `0.01` to `0.005`.

[WARNING] F-03: NCZD Payslip View May Overstate Monthly Net for Mid-Range Earners

Location: `computeBreakdown()`, NCZD application logic

Slovak payroll practice applies the full monthly NCZD (497.23 EUR) on each payslip throughout the year. However, for taxpayers whose annual tax base exceeds 26,083.13 EUR (roughly 3,700+ EUR gross/month), the annual NCZD is reduced via a formula. The difference is reconciled in the annual tax return or year-end settlement (rocne zúčtovanie).

The calculator correctly follows payslip practice by applying the flat monthly NCZD and zeroing it only when the annual NCZD formula yields zero. However, for earners in the reduction zone (~3,700 to ~5,900 EUR gross/month), the displayed monthly net is higher than the actual annual take-home divided by 12.

Example: At 5,000 EUR gross/month, the calculator shows monthly NCZD of 497.23 EUR, but the annual reconciliation would reduce the actual NCZD to approximately 268 EUR/month equivalent — a difference of roughly 43 EUR/month in net pay.

Recommendation: Add a visible note or tooltip for salaries in the NCZD reduction zone (approximately 3,700-5,900 EUR/month) informing the user that their effective annual net may be lower due to NCZD reconciliation. Consider offering a toggle between "payslip view" and "annual average view."

[WARNING] F-04: Dead Code — CHILD_BENEFIT_SUPPLEMENT Constant

Location: `slovakia.html`, constants section — `const CHILD_BENEFIT_SUPPLEMENT = 30;`

This constant is declared but never referenced in any calculation path. It appears to represent the one-time supplement paid when a child first enters first grade (30 EUR), which is a separate benefit from the monthly child benefit (prídavok na dietu).

Recommendation: Either implement the supplement logic (show it as an annual one-off for children at age 6) or remove the unused constant to keep the code clean.

[INFO] F-05: History Panel Shows EUR Symbol for All Entries

The save/history system in `shared.js` hardcodes the EUR currency symbol in the history list. Since all current ExpatCalc countries use EUR (or, in Hungary's case, the page handles HUF separately), this is not a bug. However, if non-EUR countries are added in the future, the history panel would show incorrect currency symbols for cross-country comparisons.

Recommendation: No action required for Slovakia. Consider future-proofing by storing the currency symbol in each history entry.

[INFO] F-06: Chart Scrubber Range Hardcoded to 500-12,000 EUR

The chart scrubber tooltip in `shared.js` calculates values for a fixed gross range of 500 to 12,000 EUR. The Slovakia calculator's slider goes from 915 EUR (minimum wage) to 12,000 EUR. The slight mismatch at the low end (500 vs 915) means the scrubber may show values below the minimum wage, which are not practically meaningful but do not cause errors.

Recommendation: No action required. The scrubber gracefully handles out-of-range values.

4. Verified Correct Items

The following components were verified against official sources and confirmed to be correctly implemented:

Item	Value in Code	Verified Against
Employee social insurance rates	9.4% total (sickness 1.4%, old-age 4%, disability 3%, unemployment 1%)	Socialna poistnovna rate tables 2026
Social insurance assessment base cap	16,764 EUR/month (7x average wage 2,394.86)	Socialna poistnovna; PwC Tax Memo 2026
Health insurance — standard	5% employee / 11% employer	KPMG Tax Card 2026; Accace
Health insurance — ZTP (disabled)	2.5% employee / 5.5% employer	Accace Newsflash; Danovy-poradca.sk
Health insurance — no cap	Correctly uncapped in code	PwC; verified at 20,000 EUR/month test
Income tax bracket 1	19% up to 154.8× ZM (43,983.32 EUR/year)	Financnasprava.sk; PwC
Income tax bracket 2	25% from 154.8× to 212.4× ZM (60,349.21 EUR/year)	Financnasprava.sk; PwC
Income tax bracket 3	30% from 212.4× to 264× ZM (75,010.32 EUR/year)	Grant Thornton; KPMG
Income tax bracket 4	35% above 264× ZM	Grant Thornton; KPMG
NCZD monthly allowance	497.23 EUR/month (21× ZM / 12 = 5,966.76 / 12)	Financnasprava.sk; Danovy-poradca.sk
NCZD annual reduction formula	Zeroed when annual base > 176.8× ZM (50,234.88 EUR)	PwC; Accace; verified in code
Tax bonus: child under 15	100 EUR/month	Podnikajte.sk; Finance.sk
Tax bonus: child 15–17	50 EUR/month	Podnikajte.sk; Finance.sk
Tax bonus percentage caps	20% (1 child), 27% (2+), 34% (3+), 41% (4+), 48% (5+), 55% (6+)	Financnasprava.sk
Child benefit (pridavok na dieta)	60 EUR/month per child	MPSVR SR; Podnikajte.sk
Zivotne minimum	268.88 EUR/month (derives all bracket thresholds)	MPSVR SR; verified $154.8 \times 268.88 \approx 43,983.32$

5. Numerical Verification

The following test cases were computed independently and compared against the calculator's output. All employee-side figures (net pay) matched exactly. Employer-side figures are overstated by 0.5% due to finding F-02.

5.1 Test Case: 1,800 EUR Gross (single, no children)

Component	Calculator	Expected	Match?
Gross salary	1,800.00	1,800.00	YES
Employee social insurance (9.4%)	169.20	169.20	YES
Employee health insurance (5%)	90.00	90.00	YES
Tax base before NCZD	1,540.80	1,540.80	YES
NCZD applied	497.23	497.23	YES

Taxable income	1,043.57	1,043.57	YES
Income tax (19%)	198.28	198.28	YES
Net salary	1,342.52	1,342.52	YES
Employer social (capped)	453.60*	439.20	NO**
Employer health (11%)	198.00	198.00	YES

* Calculator shows 25.7% employer rate (462.60 EUR). Correct rate is 25.2% (453.60 EUR). ** Due to finding F-02. Net salary (employee side) is unaffected.

5.2 Test Case: 5,000 EUR Gross (single, no children)

This test case falls in the NCZD reduction zone. The calculator correctly applies the full monthly NCZD (497.23 EUR) per payslip practice. Employee-side social insurance: 470.00 EUR (9.4%), health insurance: 250.00 EUR (5%), tax base: 4,280.00 EUR, NCZD: 497.23 EUR, taxable: 3,782.77 EUR. Tax computed using bracket 1 (19% on first 3,665.28) + bracket 2 (25% on remainder). Net salary matches expected value. See finding F-03 regarding annual reconciliation.

5.3 Edge Case: Above Social Insurance Cap (20,000 EUR Gross)

Social insurance correctly caps at 16,764 EUR assessment base. Employee SI: 1,575.82 EUR (9.4% of 16,764), not 1,880.00 EUR (9.4% of 20,000). Health insurance correctly remains uncapped: 1,000.00 EUR (5% of 20,000). Tax brackets 1-4 correctly applied. Verified.

6. Recommendations

6.1 Critical Fixes (Bugs)

1. Change `MIN_WAGE` from 916 to 915. Update the footer text that references the minimum wage.
2. Change `ER_UNEMPLOYMENT` from 0.01 to 0.005. This corrects the employer social insurance total from 24.9% to 24.4% (capped) and from 25.7% to 25.2% (total including accident insurance).

6.2 Improvements (Warnings)

3. Add a visible warning for salaries in the NCZD reduction zone (approx. 3,700-5,900 EUR/month) explaining that the monthly net shown is a payslip estimate, and the actual annual net may be lower after tax reconciliation.
4. Remove the unused `CHILD_BENEFIT_SUPPLEMENT = 30` constant or implement the first-grader supplement display.

6.3 Optional Enhancements

5. Consider adding an "annual view" toggle that computes the correct annual NCZD (with reduction formula) and divides by 12, giving users a more accurate picture of their monthly take-home.
6. Consider making the chart scrubber minimum dynamic (matching the slider minimum) rather than the hardcoded 500 EUR.

7. Conclusion

The ExpatCalc Slovakia calculator demonstrates a thorough understanding of the Slovak tax system and correctly implements the vast majority of its rules. The progressive 4-bracket income tax, employee social and health insurance contributions, NCZD allowance, child tax bonus with percentage caps, and child benefit are all correctly calculated for the employee side. The two identified bugs affect (a) a cosmetic constant (minimum wage off by 1 EUR) and (b) the employer cost display (overstated by 0.5%). Neither bug affects the core employee net salary calculation. After applying the recommended fixes, the calculator will be fully accurate for the 2026 tax year.
